

【problem】Reverse Words in a String

Given an input string, reverse the string word by word.

For example,

Given s = "the sky is blue",
return "blue is sky the".

【题解】

class Solution:

@param s, a string

@return a string

def reverseWords(self, s):

s = s.strip() #delete spaces at both ends

return ' '.join(list(reversed(s.split())))#revered and spaces to pick them up
